SUMMARY

Final-year Computer Science student focused on cybersecurity and security operations, with hands-on experience through a SOC home lab, TryHackMe, and security-focused projects. Built and investigated a Windows-based SIEM environment using Splunk, Sysmon, Active Directory, Kali Linux, and Nmap, with practical exposure to log analysis, authentication monitoring, alert triage, network reconnaissance, and MITRE ATT&CK. Seeking an entry-level SOC Analyst or Cybersecurity role.

EXPERIENCE

Zaravya Technologies

Software Engineer Intern

May 2026 – July 2026

Hyderabad, Telangana

- Tested web and API functionality for loyalty and HR applications using Postman and Chrome DevTools, validating responses and identifying edge cases.
- Investigated authentication, OTP, session, and input-handling behavior during application testing.
- Documented defects with reproducible steps and validation details while performing cross-browser and responsive UI testing.

PROJECTS

SIEM Home Lab

Splunk Enterprise, Sysmon, Active Directory, Windows, Kali Linux, Nmap, VirtualBox

- Built a virtualized SOC-style security monitoring lab to collect, investigate, and visualize Windows security telemetry using Splunk Enterprise and Sysmon.
- Configured Active Directory Domain Services, domain users, authentication activity, and Windows security logging in an enterprise-style environment.
- Developed Splunk searches and dashboards to monitor process creation, failed logons, successful logons, and security events.
- Simulated network reconnaissance from Kali Linux using Nmap and investigated the resulting activity through Splunk.
- Mapped observed activity to MITRE ATT&CK techniques including T1046 (Network Service Scanning), T1078 (Valid Accounts), and T1110 (Brute Force).

Phishing Simulator

Python, Flask, JavaScript, SQLite, HTML/CSS

- Built a controlled phishing-awareness platform with simulated login pages, campaign tracking, click monitoring, and an administrative dashboard.
- Implemented authentication, session management, audit logging, activity tracking, and basic risk scoring.

CYBERSECURITY PRACTICE

TryHackMe – Hands-on Security Practice

Hands-on practice across SOC operations, SIEM and log analysis, alert triage, Windows/Linux threat detection, network traffic analysis, threat intelligence, phishing analysis, Wireshark, Snort, and MITRE ATT&CK.

EDUCATION

DRK Institute of Science & Technology

B.Tech in Computer Science & Engineering

Hyderabad, Telangana

CGPA: 7.5

TECHNICAL SKILLS

Cybersecurity: SOC Operations, SIEM, Log Analysis, Alert Triage, Threat Detection, Windows Event Logs, MITRE ATT&CK, Threat Intelligence, Phishing Analysis

Security Tools: Splunk, Sysmon, Wireshark, Nmap, Snort, Kali Linux, Active Directory, VirtualBox

Systems: Windows, Windows Server, Linux, Linux CLI

Programming: Python, JavaScript, SQL, HTML, CSS, Flask, SQLite

Testing & Development: Postman, Chrome DevTools, Git, GitHub

ACHIEVEMENTS

Adobe University Hackathon – Participant

August 2026
